## Second Semester M.A. Degree (CBSS – Supple. (One Time Mercy Chance)/Imp.) Examination, April 2024 (2014 to 2022 Admissions) ECONOMICS/APPLIED ECONOMICS/DEVELOPMENT ECONOMICS ECO2C09: Basic Econometrics

| Time: 3 Hours | 0000 | 1000  | Max. Marks: 60 |
|---------------|------|-------|----------------|
|               |      | 10, \ |                |

## PART - A

Answer all questions. All questions carry equal marks.

a statistical regression analysis.

- Identify the correct statement/s related to Durbin Watson statistic.
   A) The Durbin Watson statistic is a test for autocorrelation in the residuals from
  - B) The Durbin Watson statistic will always have a value between 1 and 4.
  - C) A value of 1 means that there is no autocorrelation detected in the sample.
  - D) All of the above

| 2. | justifies normality assumption in OLS regression |                      |  |  |  |
|----|--|----------------------|--|--|--|
|    | A) Taylor's theorem                              | B) Central limit     |  |  |  |
|    | C) Gauss Markov theorem                          | D) Kruskal's theorem |  |  |  |

- 3. The CLRM assumes
  - A) Multivariate normalityB) No or little multicollinearityC) No autocorrelationD) All of the above
- 4. The term 'Econometrics' was coined by
  - A) Ragnar FrischB) Jan TinbergenC) Karl PearsonD) David Gilberman

| 5.  | 6. Which among the following measures the goodness of fit?                   |  |    |  |  |  |
|-----|--|--|----|--|--|--|
|     | A) d statistic   | B) p value   |    |  |  |  |
|     | C) R square  | D) Standard deviation                              |    |  |  |  |
| 6.  | Heteroscedasticity is related to   |  |    |  |  |  |
|     | A) Chow test   | B) Breusch-Godfrey test                            |    |  |  |  |
|     | C) Goldfeld-Quandt test  | D) Jarque-Bera test                                |    |  |  |  |
| 7.  | When all the equations are exactly ide                                       | entified, one can use the method of                |    |  |  |  |
|     | A) ILS B) OLS  | C) GLS D) 2SLS                                     |    |  |  |  |
| 8.  | 8. The term 'u' in an econometric model is usually referred to as            |  |    |  |  |  |
|     | A) Parameter   | B) Disturbance term                                |    |  |  |  |
|     | C) Random variable   | D) Dependent variable (8×½=4                       | 4) |  |  |  |
|     | PART   | - B  |    |  |  |  |
|     | swer <b>any eight</b> questions. <b>Each</b> questi<br>ceed <b>one</b> page. | on carries <b>2</b> marks. <b>No</b> answer should |    |  |  |  |
| 9.  | . Differentiate between slope and intercept.                                 |  |    |  |  |  |
| 0.  | ). What are the causes for multicollinearity?                                |  |    |  |  |  |
| 1.  | . Distinguish between PRF and SRF.   |  |    |  |  |  |
| 2.  | 2. What do you mean by econometric method of forecasting?                    |  |    |  |  |  |
| 3.  | B. What is meant by analysis of variance ?                                   |  |    |  |  |  |
| 4.  | . Write down the general form of a linear regression model and interpret.    |  |    |  |  |  |
| 15. | Define repressor.  |  |    |  |  |  |
| 6.  | What is the purpose of Park test?  |  |    |  |  |  |
| 17. | What do you mean by test of significa  | nce ?  |    |  |  |  |
| 8.  | . Prepare a note on the scope of Econometrics.                               |  |    |  |  |  |
| 19. | State the functions of a random varial                                       | ole. (8×2=10                                       | 6) |  |  |  |

## PART - C

Answer **any four** questions. **Each** question carries **5** marks. **No** answer should exceed **2.5** pages.

- 20. Define Heteroscedasticity. Explain the consequences of Heteroscedasticity. Point out the methods of its detection.
- 21. What is meant by identification problem in econometrics? State the rules of identification.
- 22. Describe the functional forms of regression models.
- 23. Explain meaning and significance of error term in econometrics.
- 24. Explain Hausman specification test of endogeneity.
- 25. Describe the methods of Generalized Least Squares estimation. (4×5=20)

## PART - D

Answer **any two** questions. **Each** question carries **10** marks. **No** answer should exceed **6** pages.

- 26. Discuss the meaning and causes of autocorrelation. Explain Durbin Watson statistic as a test of autocorrelation.
- 27. Define Econometrics. Describe the methodology of Econometrics.
- 28. What are simultaneous equations models? Distinguish between ILS and 2SLS and discuss their features.
- 29. Explain Ordinary Least Squares method. State and prove the properties of an OLS estimator. (2×10=20)
